1/ Includes the major fields of "engineering" and "engineering and engineering-related technologies."

2/ Includes the major fields of "allied health" and "health sciences."

The field of study structure was completely revised and became effective with the 1982-83 data. Therefore, exact comparisons with data prior to 1982-83 are not possible but certain major fields match closely.

The number of bachelor's degrees in certain major areas has changed substantially since 1973-74. In 1973-74, 13.2 percent of all bachelor's degrees were awarded in business and management. By 1982-83 that percentage has risen to 24.2. Similar comparisons show increases for computer and information sciences from 0.4 percent to 3.3 percent; for engineering from 5.3 percent to 9.8 percent; and for health professions from 4.0 percent to 7.3 percent.

Conversely, bachelor's degrees in education and the social sciences have fallen. Whereas education comprised 22.6 percent of all bachelor's degrees in 1973-74, it now accounts for only 9.3 percent. Likewise, social sciences fell from 16.1 percent to 9.6 percent of all bachelor's degrees.

[1] Racial/ethnic data has been collected biennially since 1976-77.

[2] Persons having origins in the original peoples of the Indian subcontinent were classified as White, non-Hispanic through the 1976-77 survey but are now classified as Asian or Pacific Islander.

[3] The 1974-75 survey did not list non-resident alien as a separate category.

For the 1975-76 year, there were 5,792 minorities identified as receiving an associate or higher degree which accounted for 6.4 percent of all degrees conferred. By comparison, 6,871 minority graduates comprised 7.1 percent of the 1982-83 total.

Specifically, the number of Black, non-Hispanic graduates has grown and apparently leveled off at just under 5,000. The number of Asian or Pacific Islander graduates has doubled since 1978-79.

The specialized associate degree-granting schools and the state school of technology increased their enrollments by 6,107 students for an increase of 28.3 percent.

While all three types of institutions saw a rise in their number of students, the effect on the percent of the total fall enrollment was somewhat different. The percent of students enrolled in public institutions fell four-tenths of one percent and the private institutions saw a decline of six-tenths of one percent. The specialized associate degree-granting institutions and the state schools of technology increased their percentage of the total fall enrollment by one full percentage point.

1982-83	6 414	2 322	1 189	1 569	1 334

The total number of teachers prepared during the 1982-83 year continues to decline. The 1982-83 total, 6,414, is 33.0 percent of the 1971-72 total, the peak year in teacher preparation. The number of secondary teachers, 1,189, is only 18.0 percent of the number prepared during the 1971-72 year. This, along with declines in other areas, demonstrates the rising potential for teacher shortages in many areas.

The number of teachers finding employment in the teaching profession has continued to decline at approximately the same rate as the number prepared. However, 34.2 percent of the people reported are listed under the "no information" heading (see Table 6, page 12). This lapse in follow-up by the preparing institutions allows one to draw the faulty conclusion that there is still a surplus of teachers.

1982-83	6 414	3 419	1 224	51	1 720

Preparation of teachers has traditionally fallen on the shoulders of the state universities. For example, in 1973-74 the state universities prepared 55.4 percent of all those receiving initial certification. This current year the percentage has fallen to 53.3. The state-related universities have prepared 19.1 percent of these new teachers which compares to 16.8 percent in 1973-74. The private state-aided institutions have continued to have a smaller and smaller percentage of those initially prepared. Their percentage has fallen to 0.8 percent for this year, down from 1.1 percent in 1973-74. The private colleges and universities held their own in the percent of new teachers prepared. Currently they are preparing 26.8 percent of the new teachers which compares with 26.7 percent during the 1973-74 year.

Last year was unique in that three of the four categories of institutions showed an increase in the number of teachers prepared. This year the across-the-board declines became the rule again. Last year's "bottoming out" phenomenon appears to be just that.

INTRODUCTION

"Public School Professional Personnel, 1983-84" is one in a series of publications containing statistical summaries related to basic education, higher education, and vocational education in Pennsylvania. The data contained in this publication reflect current year figures as well as trends on a variety of selected topics. In many instances, more detailed data are available.

This report contains data on salaried personnel only. Data for employes paid on a per diem basis, interns, and exchange teachers, to cite a few examples, are not included. The reader should keep in mind that information presented by position or assignment deals with people rather than positions. If an employe worked in more than one position or assignment, the person was counted only in the position or assignment in which a majority of his or her time was spent. In cases where the time was divided equally between two or more assignments, the chief school administrator selected one assignment. All data are for personnel employed on a full-time basis in the schools.

Because of reporting difficulties and because salary contracts had not been settled at the time the reports were submitted, 1982-83 salaries or 1982-83 salaries with mandated increments were reported for all or a portion of the employes in the school districts of Brandywine Heights Area, Central Fulton, Derry Area, East Allegheny, Greater Nanticoke Area, Great Valley, Moon Area, Muncy, North Penn, Tussey Mountain, Twin Valley, Wattsburg Area, and Waynesboro Area and the area vocational-technical schools of Schuylkill Valley and West Side.

In analyzing the data relative to level of education, it must be noted that the figures are not synonymous with years of higher education, but are codes used in the project. However, these averages can be used for comparative purposes. The codes upon which the averages are based are as follows:

1	No college
2	One year of college
3	Two years of college
4	Three years of college
5	Bachelor's degree
6	Master's degree
7	Master's degree plus 30 graduate credits
8	Master's degree plus 60 graduate credits
9	Doctor's degree

The Professional Personnel Record includes professional positions not recognized as such by the Department of Education or in the "School Laws of Pennsylvania." They are included as they do exist in certain administrative units. However, their inclusion here does not constitute official recognition as professional positions by the Department of Education.

Requests for more detailed data and questions or comments about the data should be addressed to the Department of Education, Division of Data Services, 333 Market Street, Harrisburg, PA 17126-0333 (Phone 717-787-2644).

The 119,359 full-time personnel employed in professional positions in the public schools of Pennsylvania at the beginning of the 1983-84 school year was a 1.6 percent decrease from the 121,328 employed last year, and a 10.6 percent decrease from the 133,541 employed nine years ago.

During this 10-year period, the classroom teachers group showed the greatest loss with an 11.6 percent decrease, while the coordinate services group showed a decrease of 0.7 percent. The administrative/supervisory group showed a slight gain of 0.2 percent.

Classroom teachers accounted for 85.6 percent of the total number of 119,359 in 1983-84; coordinate services personnel accounted for 8.2 percent; administrative/supervisory, 5.4 percent; and the position classifications of 0.8 percent were unknown. These percents changed very little over recent years as evidenced by the fact that the 85.6 percent for classroom teachers was only a 1.0 percent difference from the 86.6 percent figure nine years earlier.

A major change in data reporting took place in 1982-83. This change involved the reporting of Pell Grants under current-funds revenues and expenditures. Prior to this year, Pell Grants were treated as agency funds and were not reported on the survey.

On a year-to-year basis, the increase for each of the past four years has been 12.8, 12.8, 12.1, and 13.4 percent. However, with the $104,622,366 in Pell Grants removed for 1982-83 the latter percent falls to 10.8 percent. Of the Pell Grant total, $62,239,738 was disbursed by public institutions and $42,382,628 by private institutions.

For the reporting institutions, tuition and fees and government funds continue to be the main sources of current-funds revenues. Government funds include government appropriations, grants, and contracts at the federal, state, and local levels. Although the actual dollar amount increased, government funds accounted for a smaller percentage of total current-funds revenues each year from 1975-76 through 1981-82. However, with the inclusion of Pell Grants in the 1982-83 data, the percentage also has increased slightly when compared with 1981-82.

Although the percentage for "other" decreased in 1982-83 (the last decrease was for 1975-76), this category remained as the second largest source of revenue. "Other" includes sales and services of educational activities, sales and services of hospitals, independent operations, and other sources not covered elsewhere.

The total current-funds expenditures increased by 160.7 percent from 1973-74 to 1982-83. Over the same period, current-funds expenditures at the private institutions increased by more than $1.6 billion or 202.2 percent. By comparison, the increase at the public institutions was only 121.3 percent. The increase from 1981-82 to 1982-83 was nearly equal for the two sectors. Expenditures for the public sector increased by 13.6 percent as compared to 13.7 percent for the private sector.

1/ Includes Pell Grants.

Although current-funds expenditures identified as educational and general increased each year from 1973-74 through 1982-83, they comprised a smaller percentage of the total current-funds expenditures. Educational and general includes expenditures for instruction, research, public service, academic support, student services, institutional support, operation and maintenance of plant, scholarships and fellowships, and educational and general mandatory transfers. The function of auxiliary enterprises also comprised a lesser percentage of the total during the period. The function listed as "other" includes expenditures for hospitals and independent operations. The substantial rise in expenditures for hospitals over the ten-year period accounts for the percentage increase of the "other" function.

[1] Due to reporting inconsistencies, the 1982-83 enrollment figure as reported was too high. It is estimated that the 1982-83 nonpublic enrollment could be some 6,600 students lower with most of the difference found at the elementary level.

The overall enrollment pattern for the nonpublic schools during the past decade shows a general decline with a slight increase for the last three years for elementary enrollments. The secondary enrollments are starting to level off although a slower decreasing trend is expected to continue.

The total nonpublic school enrollment for 1983-84 was 396,233, an increase of 0.5 percent over the 1981-82 figure of 394,099. This increase is due primarily to the higher birth rates during the late seventies and the resulting increased enrollments in the lower elementary grades. While this has also been true in the public sector as well, its immediate affect is not as readily noticed due to the larger numbers of elementary students in general.
